# Intro to Web Programming

Designed for Ages 12 and Up
## Saturday, October 17th & 24th 2015
10:00am-1:00pm
$125 ~ Two-Week Session

Would you like to learn to create an on-line social network, e-commerce site or digital game?  This course provides an introduction to a set of programming languages and technologies that are the foundation of web application development.  We'll create a social network application from scratch.  Along the way, you will learn the basics of these four languages: HTML, CSS, SQL and ColdFusion.  At the end of this course you will be able to create a basic web application yourself, understand important programming concepts that apply to all programming languages, understand basic security practices to protect your code from evildoers and be able to set up your own computer to use for developing web sites and applications by yourself.

**About the instructor, Peter Kleid**
Peter has worked for the past 12 years developing web applications for a large manufacturing company.  Although his degree is in Metallurgical Engineering, a few years after starting a career in that field he realized that computer programming was his greater passion.  The technologies that you will learn in this course are used every day by professional programmers. He is eager to pass his knowledge and experience to the next generation of programmers.

Students will <u>not</u> need to bring a computer to class.
Students <u>will</u> need access to a computer to do the homework assignments.

Location: "Apple Barn", 60 Old Farms Road, West Simsbury

**Limited Class Size ~ Registration and Pre-payment Required**
